/// HWT Hand Wash Timer

When it comes to preventing the spread of germs, every action counts. For foodservice operators, staying healthy can be as simple as washing your hands.

According to the World Health Organization (WHO) and Centers for Disease Control (CDC), washing your hands is the single most important way to prevent the spread of infection. Experts recommend washing for at least 20 seconds to prevent harmful germs and infections from spreading. However, accurately counting these 20 seconds isn't always easy. Remove any room for error by installing a touchless HWT-20 Hand Wash Timer near every sink.

The HWT-20 is an easy-to-use and hands-free tool that provides a visual countdown of the 20 seconds that experts recommend for washing hands. A well-placed HWT-20 encourages safe cleaning habits for your employees as well as demonstrates your business' commitment to health and safety requirements to customers and health inspectors. For more than 10 years, the Antunes Hand Wash Timer has helped operations around the world keep best cleaning practices around the world.

The HWT-20 is a touch-free unit that requires no user intervention. It mounts easily to any surface and runs on two AA batteries with an estimated operating life of three years.

Remember: Your Health Is In Your Hands!
